

# OpenType FontFonts

OpenType **FontFonts** do everything that the old **PostScript** and **TrueType** formats could do – and so much more.

With OpenType, multiple platforms (Mac and PC), multiple fonts (small caps, expert, various figure sets) and multiple languages (Western, Cyrillic, Greek) can exist in a single font file. Ligature, swash, and alternate characters can be applied automatically. Each font can hold thousands of extra characters, vastly enhancing your typographic toolset.

OpenType **FontFonts** support a broader range of languages than OpenType **FontFonts** (Western) FontFonts. (Supported language encodings include **Central European**, **Latin Extended**, **Greek**, **Cyrillic** and **Cyrillic Extended**.)

Each OT FontFont is accompanied by a font-specific Info Guide listing all its layout features and the language encodings that it supports.

See the FontFont OpenType User Guide for complete details.
